PUMPTRACK WHAT IS IT?

The “PumpTrack” is a very fun playground and training ground. The principle is simple, a closed loop composed from bumps or also called “rollers”, followed by banked turns, called “berms”, we evolve without putting the slightest pedal stroke. The basic method is to use the track movements, in order to gain speed, by "pumping", that is to say by the only transfer of the rider's center of gravity (weight of the body) forwards or backwards. The forces that act on the riders are only those that they manage to produce on their own. Thus, the requirements and technicality increase with the degree of know-how.

Making it the perfect initiation and training ground for mountain biking. It can be used without distinction of equipment, level or age.

It does not necessarily require large spaces, is built with high compaction mineral materials (also used in road construction). It requires minimum maintenance; a simple sweep and periodic watering are enough to keep it in good condition so that everyone can enjoy it.

Options are available, such as; irrigation system and re-vegetation.

Its low cost and speed of installation in the basic version, make it the least risky investment to start a mountain biking dedicated infrastructure .

BUDGET

Description	Quantity	Unit Price	Cost
PicNc area			
Tables	3	\$250	\$750
BBQ	3	\$321	\$964
Concrete	10	\$10	\$100
Canoe rack			
Racks	TBD	TBD	
PumpTrack approx 250m2			
Machines	5	\$1,000	\$5,000
Materials, custom road base (cubic yard)	200	\$40	\$8,000
Total			\$14,814

Below is an exemple of BBQ selected
